

CQ20 Pressure Switch

OUTLINE

This is a pressure switch in which a Bourdon tube is applied to the pressure sensing element. The move of the Bourdon tube directly activates the microswitch, turning on and off the circuit. This switch is appropriate for the pressure control of air pressure, water pressure, oil pressure, etc. for liquid level control, flow control, etc.

FEATURES

- As this switch is of microswitch type, stable turning on and off operation is assured by snap action.
- This switch demonstrates excellent vibration resistance, and can be directly attached to equipment as a job site type.

* In case of selecting pressure gauge, choose the pressure range which can be used in between 30 ~ 65% of full scale, so that the gauge can give its full capacity.

REMARKS

- As a sequencer input;
Use this switch in the ventilated condition.
Otherwise the following might be caused.
The contact resistance of the microswitch increases gradually as time passes.
For the application in the atmosphere, especially including Si, SiO₂ will be accumulated on the contact part as switch operated. Then the contact resistance will be increased, so that switch may be not operated.
Therefore, above is suggested for the application condition, including Si atmosphere.
When you use this switch as sequencer input for controlling, input or connect through 100V AC Relay.
- Installation of protection circuit for contact
In the inductive load open and close circuit, install the protection circuit to protect the contact.
When you use the relay, choose the built-in protection circuit for the contact.
